Panama's Forests are Rich in Biodiversity

Forests and Trees Provide Services for Local People

Living fences provide shade and fodder for cattle

Medicinal plants

Construction materials

Managing Water is Essential for Canal Operations

Too little water leads to draft restrictions as in the 1997 El Niño

Too much water puts Canal infrastructure at risk as in 2000 (and 2010!)

Panama Canal Water Budget

	cubic km/yr	cubic m/sec
Total Runoff:	4.4	139
Lockages*:	2.6	82
Hydroelectricity:	1.2	39
Drinking:	0.27	9
L+H+D =	4.1	130
Total, 1982:	3.3	105

* 37 per day at 191,000 cubic meters per lockage

Inputs and Outputs in Two Agua Salud Watersheds

Figura 14 Precipitación mensual en las microcuencas de Agua Salud 2 y Agua Salud 3 (PMCC 1998).

Precipitation in focal watersheds in 1997-98

Stream flow in focal watersheds in 1997-98

Hassler et al. (en imprenta): *K_s* depende de uso del terreno en los a) 0-6 cm de profundidad y de b) 6-12 cm de profundidad. Clases de cobertura de terreno están abreviados con P para potrero, SF5 para bosque secundario joven, SF12 para bosque secundario de 12 años y SF100 para bosque de 100 años. Los parámetros de los diagramas de cajas están explicados en la sección 2.6. Letras del subíndice visualizan el resultado del test de Kruskal-Wallis: Letras diferentes indican diferencias significativas entre los grupos ($p < 0.05$).

Soil Organic Carbon Stocks in Regenerating Forests at the Agua Salud Focal Research Site
